

FastTracker

Audits and Inspections in Office 365

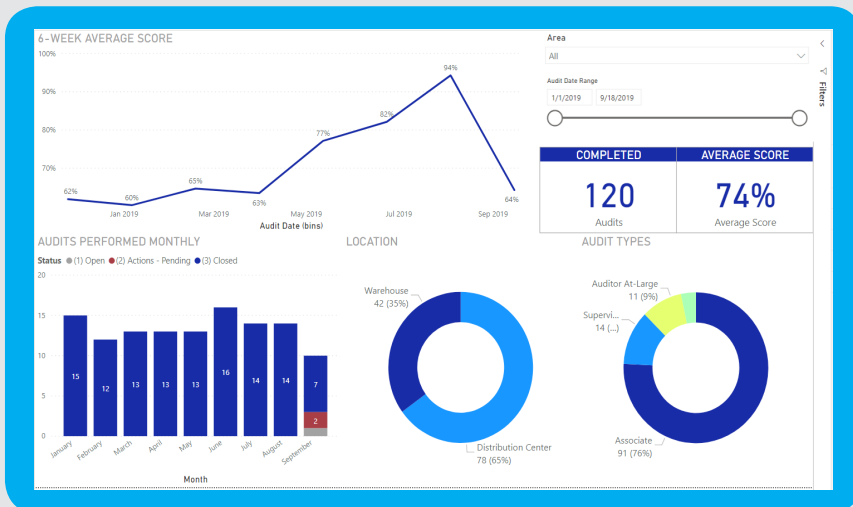

FastTracker provides a user friendly interface built on top of the modern Office 365 environment using the Microsoft Power Platform suite of tools. This application dynamically gathers relevant pre-established questions per facility, location, area, or other criteria as defined to generate an electronic inspection/audit/checklist. These questions can be scored and aggregated for analytics via PowerBI reports and associated workflows to trigger email alerts based on a set criterion. All collected data is stored and retained on SharePoint libraries and lists allowing for flexibility.

System Benefits

- Leverages Microsoft’s Power Platform saving the costs of complex licensing, as most Office 365 licenses include access to these tools.
- Quick and efficient data collection for inspections, audits, and checklists.
- Data portability via SharePoint and Power Platform capable devices (phones, tablets and laptops).
- Customizable analytics via PowerBI reports.
- No proprietary software.

System Features

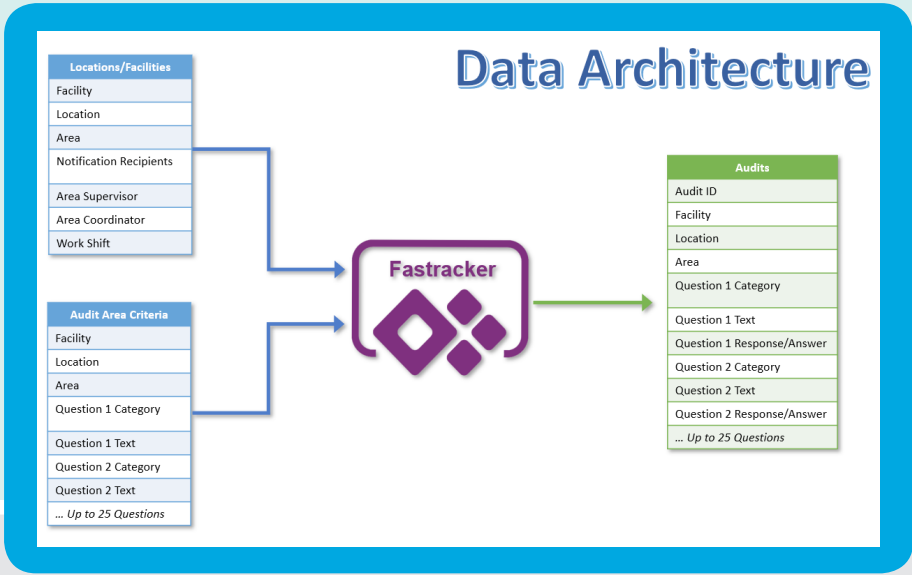

- Custom made to match your branding guide.
- User-managed questions, locations, and criterion can be modified without programming or development and still retain history for existing inspections, audits, or checklists.
- Includes reference materials for easy lookups while collecting data in the field.
- Automatically sets fields based on criterion provided.
- Utilizes drop-down lists for easy data input.
- Integrates corrective action tracking, associated notes, and attachments.
- Employee recognition tool is integrated to allow for quick and easy acknowledgement of high use individuals.
- Leverages PowerBI reports to present relevant data points and analytics in charts and graphs to visualize data.
- Permission-based functionality is included so specific users can accomplish tasks based on access levels.
- Custom workflows to fit existing business processes using Microsoft Flow for email, SMS, or mobile app notifications.
- Custom access on changes to inspections, audits, or checklists to restrict/grant access.

Inspection process made easy

Simplify your audits

Save time

Organize your data

Tablet/Web PowerApp for inspections, audits and checklists

FastTracker Technical Details

Microsoft has released PowerApps, PowerBI, and SharePoint apps for Android, iOS, and via web browsers on Windows and Macintosh systems that can all utilize the tools and reports provided by FastTracker from anywhere you have an internet connection.

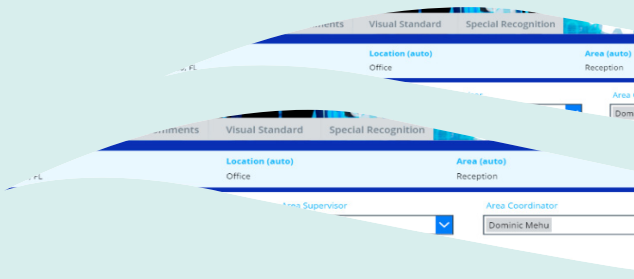

** Requires an active internet connection to store/receive data from SharePoint online or active network connection for on-premise SharePoint servers.*

ABOUT US

FOUNDED IN 2002

MSE Group, a Montrose Environmental Group company, is an international environmental, engineering, and construction firm providing qualified and competitive environmental, engineering, and health and safety services to public and private entities nationwide. Success for our clients, teaming partners, and employees is derived from an intense work ethic and the ability to enjoy the journey.

As a part of the broader Montrose network, which includes more than 70 offices globally, MSE stands ready to support your needs and exceed your expectations every time.
